

Syllabus for Mathematics 2443-006H - Honors Calculus IV - Spring 2002

Please read this syllabus carefully. You will be responsible for all the information given here, and for any modifications to it that may be announced in class.

Text: The textbook for this course is *Calculus*, (4th edition), by James Stewart.

Instructor: Darryl McCullough, Professor of Mathematics

Office: 804 Physical Sciences Center

Phone: 325-2743

Email: dmccullough@math.ou.edu

URL: www.math.ou.edu/~dmccullo

Office hours: Tu 3:00-3:30, Wed 1:30-3:30, Th 3:00-3:30, and by appointment.

Class Participation: You are expected to attend and participate in all lectures, and are responsible for all information given out during them.

Homework: *It is absolutely essential to work a large number of problems on a regular basis.* Problem assignments with due dates will be posted on the course web page. The homework assignments are the *bare minimum* for most students to gain basic familiarity with the material. As manager of your own education, it is up to you to work whatever additional problems may be necessary for you to master the subject.

You may consult with other students about the homework problems, indeed I encourage you to do so. However, you will need to write up the solutions clearly, carefully, and in your own words. That is the only way to achieve and retain understanding. It is a complete waste of time to just copy from a solutions manual or from someone else's work.

Answers to the odd-numbered problems appear at the end of the textbook. For help, you can come to my office hours, or make an appointment with me to come at another time. Email is the best way to contact me. If my office telephone is busy, it usually means that I am off campus and am connected to my office computer by modem.

Testing: There will be three in-class examinations. Their dates and coverage will be announced in class.

The final examination will be held in the usual lecture room on Friday, May 10, 8:00–10:00 a. m. University regulations require that you take it at that time.

Grading system: Your grade will be based mainly on your performance on the examinations. I will examine your homework cursorily, and my composite impression of your semester's homework effort will count about the same weight as an in-class exam. If you miss more than four lectures, your grade will be lowered by one letter. I have no concept of an excused absence— I assume that you are an intelligent person, so if you are not in class, you must have a very good reason for not being there.

Withdrawal Policy: Until January 28, there is no record of a grade for dropped courses. From January 29 through March 29, you may withdraw and receive a “W” grade, *no matter what scores you have so far achieved*. After March 29, University regulations specify that you may withdraw only in “very unusual circumstances,” and only with the permission of the Dean. *Avoidance of a low grade is not sufficient reason to obtain permission to withdraw after March 29.*

Grade of Incomplete: The grade of “I” is a special-purpose grade given when a specific task needs to be completed to finish the coursework. This is typically a term paper or other special assignment, so rarely makes sense in a mathematics course. An “I” cannot be given to avoid receiving a low grade.

Calculators: This is a course of mathematical concepts and techniques, not a course of mechanical computation. You may use a calculator when working on the homework assignments, if you wish, but use of calculators or other mechanical aids during exams is prohibited.

Academic Misconduct: In the unlikely event that cases of academic misconduct arise, they will be dealt with according to University policies.

Students with Disabilities: If you have a disability that may interfere with the demonstration of your abilities, please contact me as soon as possible to arrange accommodations necessary to ensure your full participation in the course.

Final Grades: Grades will be posted on our course website as soon as they are available. You may pick up your graded final exam from me any time within one year of the end of the course, after one year they will be discarded.

Internet Resources: On the Internet there are numerous websites that contain theory, tutorials, and problems with solutions, for calculus and in some cases more advanced material. Our course web page has a link to some of these sites, and if you follow it to the UC Davis Calculus Page, there is a much longer list there.

Advice: Stay caught up. Always use good mathematical notation. Live with calculus.
