Question 1. Compute:
\[ 2\frac{1}{3} + 1\frac{1}{3} = \quad ; \quad 3\frac{1}{5} - 1\frac{1}{2} = \quad . \]

Question 2. Compute and simplify
\[ \frac{2}{3} \times 1\frac{1}{3} = \quad ; \quad \frac{3}{5} \div 1\frac{1}{2} = \quad . \]

Question 3. Tell: John has two oranges, five apples, ten bananas; his little brother Ben has one oranges, none apply and one banana. What they have together?

Question 4. Find
\[ 2\frac{1}{3} + 3\frac{1}{3} - 1\frac{1}{3} + 5\frac{1}{3} = \quad . \]

Question 5. Simplify
\[ 2\frac{1}{3}x + 3\frac{1}{3}x - 1\frac{1}{3}x + 5\frac{1}{3}x = \quad . \]

Caution: Parents, please do read the questions first to double check them. It might help (I do not know) to encourage kids to make the similar problems by themselves.
